

## Book Library

### Description

The Book Library is an online web application where book enthusiasts come to discover what the next great read is. Users can search and browse for new book titles. A newsletter helps users stay informed when new releases are announced and an online forum engages users with each other with targeted topic discussions.

### Project details

- Category: General
- Difficulty:
- Suggested stack: Not specified
- Approval status: Approved

### Target users

System Administrator

Registered User

Anonymous User

### Tags

MVP, Notes, Optional

### User Stories

#### Search

As a user of the website, I need search functionality so that I can easily locate books in the library. Search criteria can include (author, character, location, and keyword).

#### Add a book

As the system administrator, I can add books to the system to increase the size of the library.

#### Search for new books

As a registered user, I can search for books that have been added since the last time that I searched for new books so that I can find new things to read.

#### Forum

As a registered user of the site, I need the ability to participate in an online forum so that I can communicate with other book lovers and receive advisory assistance.

#### Reading List

As a registered user of the site, I need the ability to create a reading list and add books to it so that I can keep track of what I have already read and what I need to read.

### Create Weekly Polls

As an administrator of the site, I need the ability to create weekly polls so that a user can nominate specific books, authors, or characters for awards.

### Weekly Polls

As a registered user of the site, I need the ability to fill out and complete weekly polls so that I can nominate my favorite books, authors, or characters for awards.

### Newsletter

As a registered user of the website, I need the ability to sign up for a newsletter so that I can be notified when there are new books matching my interests.
